SUMMARY

Senior Java Software Engineer with over 6 years of experience in developing and maintaining Java applications. Proficient in all phases of the software development lifecycle, with a solid background in back-end development, API integration, and microservices architecture. Adept at collaborating with cross-functional teams to deliver robust and scalable solutions.

TECHNICAL SKILLS

- **Programming Languages:** Java, Groovy, SQL, TypeScript, Visual Basic
- **Front-End Technologies:** Angular, HTML, CSS
- **Back-End Technologies:** Spring, Spring Boot, Hibernate, JPA, MapStruct
- **Database Management:** Oracle, PostgreSQL, MongoDB, Redis, Liquibase
- **Web Development:** RESTful APIs, OpenAPI, SOAP, WebSockets
- **Messaging/Event Streaming:** Kafka, RabbitMQ, HermesJMS
- **Build Tools:** Gradle, Maven
- **Version Control:** Git, Bitbucket, GitHub, SVN
- **DevOps & Observability Tools:** Docker, Jenkins, Kibana, Elasticsearch, Kiali
- **Testing Frameworks:** JUnit, Mockito, WireMock, TestContainers
- **Containerization and Orchestration:** Docker, OpenShift
- **Agile Methodologies:** Scrum, Kanban
- **Other Tools:** Jira, Confluence, IntelliJ IDEA Ultimate, Teams

WORK EXPERIENCE

Java Developer, SYTOSS (Telecom)

Apr 2019 - Jan 2026

Technologies: Java, Spring Boot, Hibernate, PL/SQL, OpenShift, Jenkins

- Maintained and enhanced enterprise-level Spring Boot applications.
- Designed and implemented RESTful APIs to facilitate seamless communication between front-end and back-end systems.
- Integrated RESTful APIs with front-end components, ensuring smooth data flow and user interactions.
- Configured and customised AmdocsCRM modules for telecom clients, improving customer data management.
- Collaborated with QA and business teams to fix issues, improve system performance, and ensure data accuracy.
- Participated in Agile ceremonies and contributed to sprint planning, estimation, and retrospectives.

Key Achievements:

- Played a key role in developing and integrating microservices during the migration from a monolithic system to a distributed architecture on OpenShift. Designed, refactored and successfully released to production several key systems:
 - **Centralized configuration service** to eliminate tight coupling between microservices, enabling **dynamic configuration management** and independent service deployments, environment-specific settings, **runtime updates** without redeploy, and consistent configuration across all services, improving system reliability and operational efficiency.
 - **Distributed asynchronous integration layer** for multi-step third-party workflows, applying **idempotency and compensating events** to ensure safe retries and consistent recovery from partial failures;
 - **Database migration service** using **Liquibase** to automate schema evolution and data updates, reducing manual migration errors and improving **deployment reliability**;

- **Suite of tools** to streamline E2E and integration test creation, supporting automated generation of complex test data and reusable mocks.
- Onboarding and mentoring:
 - Managed the **onboarding process** for 10+ team members, mentoring and guiding them through systems, workflows, and best practices, enabling faster contribution to active projects;
 - Led a team of junior developers, providing **mentorship, technical guidance, coordinating development processes**, and conducting numerous **code reviews** to ensure high code quality and timely delivery.

EDUCATION

Bachelor's degree, Automation Engineer

National Technical University «Kharkiv Polytechnic Institute»

Sep 2016 - Jun 2020

ADDITIONAL INFORMATION

Languages:

- English - Upper-Intermediate
- Ukrainian - Native
- Russian - Native

Certifications:

- Software Architecture & Design of Modern Large Scale Systems (Udemy)
- Docker - Hands On for Java Developers (Udemy)
- Java Multithreading, Concurrency & Performance Optimization (Udemy)
